# Mass Updates – Inventory Items

Software Development

RIMSS Business Systems Technology

Mass Updates is a new (and expanding) feature that will allow the user to update certain fields in their Part Masters. This feature is a paid module and must be turned on by RIMSS Support. Once the module has been turned on, the WinNetStar Administrator must then grant permission to those users who will have access to the module. This permission will allow the user to access Inventory > Utilities > Mass Updates.

The Mass Update – Inventory Master is similar to the Inventory Master List. You can use Pre-Fetch or Post-Fetch filters, Filter Editors, save and modify Layouts and Group column headers to create the list that you can then update based on the selections in the header.

Currently, you can mark Part Master(s) Inactive or Active, change Pricing, Stocking and Accounting Sources, update Stock Classes and change Best Stocking Level and Best Reorder Points Quantities.
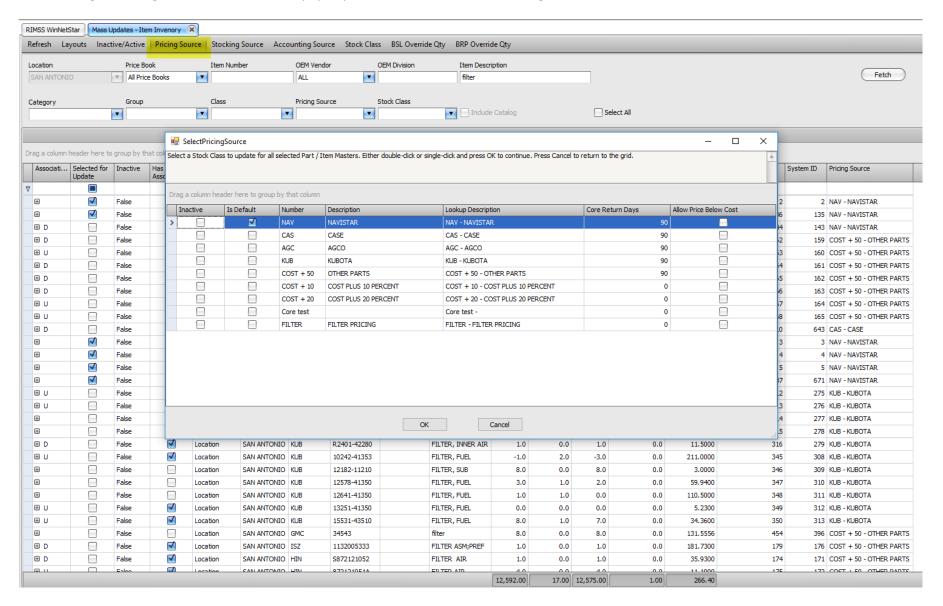

In this example, we are going to update the Pricing Source for all parts with the Description of Filter. The Pricing Source has been added and a search for all Item Descriptions for "Filter" have been fetched. This list can then be filtered down even further or the user can start check-marking those items to be updated.
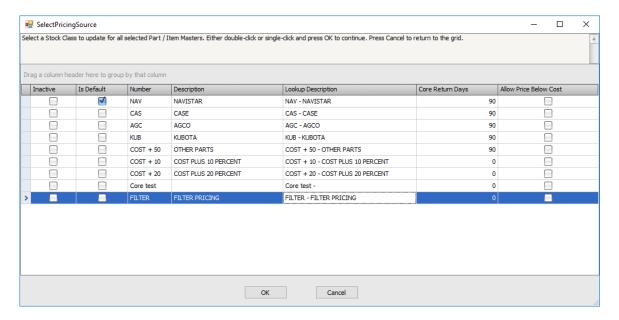

RIMSS WinNetStar	Mass Updates – Item Invenory [x]

After clicking on Pricing Source, a selection box pops-up for the user to select the Pricing Source the user wishes to use.
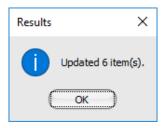

Select the appropriate Pricing Source and click OK.

The user will receive a warning message with the amount of items to be changed.

Once the update is complete, the total number of items changed will be displayed.

Once the data has been changed, the user can Fetch the list again to see the changed items.

Once a list has been filtered or grouped to include the data that is being updated, the user can also use the Select All option to select only the items that match the filter in the Pre-Fetch, Post-Fetch or created by using the Filter Editor.
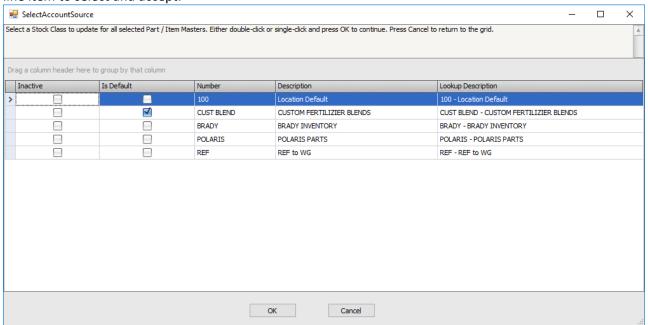

Lists can be grouped to aid in selecting specific items to be updated. However, the list will need to be fully expanded before you can update items,
